Upcoming dates	10 Oct & 17 Oct 28 Nov & 05 Dec
Costs	EUR 1,890 + VAT USD 2,100 GBP 1,575
Other	Discounts available for groups
Book	Via www.sita-training.com or contact@sita-training.com

The ability to integrate sustainability & mainstream investment factors will be the critical differentiator in sustainable investment over the next two years.

This course enables 'mainstream' investment analyst & PM team to participate and win in this critical area.

Outcomes

After taking this course, you will be able to:

- Identify relevant sustainability and corporate governance factors and integrate these into your investment research and decision-making
- Communicate confidently with companies, colleagues, clients and other stakeholders about these factors and their relevance (or not) to your investment activities

Differentiation

This course differentiates itself from others in the market through a robust focus on practical applicability by 'mainstream' investment analysts.

While we understand that such analysts need to understand the policy context and client requirements around 'ESG', we are primarily focused on the biggest question: "How can I use this information to improve my sector allocation and stock selection decisions?"

We are not aware of any other courses with this focus.

Who should participate

'Mainstream' financial analysts or portfolio managers - including those with an active mandate to 'integrate' and those with a general interest or corporate requirement to do so

Why they should participate

The ability to integrate sustainability factors with 'mainstream' investment decision-making will be the critical differentiator in the next phase of the sustainable investment evolution. To make this possible:

- 'Mainstream' investment analysts will need to understand sustainability
 - (This course)
- Sustainability analysts will need familiarity with the basics of financial analysis, modelling & valuation
 - (Financial analysis, modelling & valuation)

Course elements

Teaching includes a combination of:

- Structured presentations
- Group discussions
- Solo-working exercises

Light-touch 'homework' will be set between the two sessions to enhance the applicability of the training. However, this is designed to integrate with the normal course of an analyst's job and will not require extra time.

Sessions & modules

All times are GMT or British Summer Time as appropriate

Programme for Day 1

13:00	START OF DAY
